

SMART UTILITIES / IOT

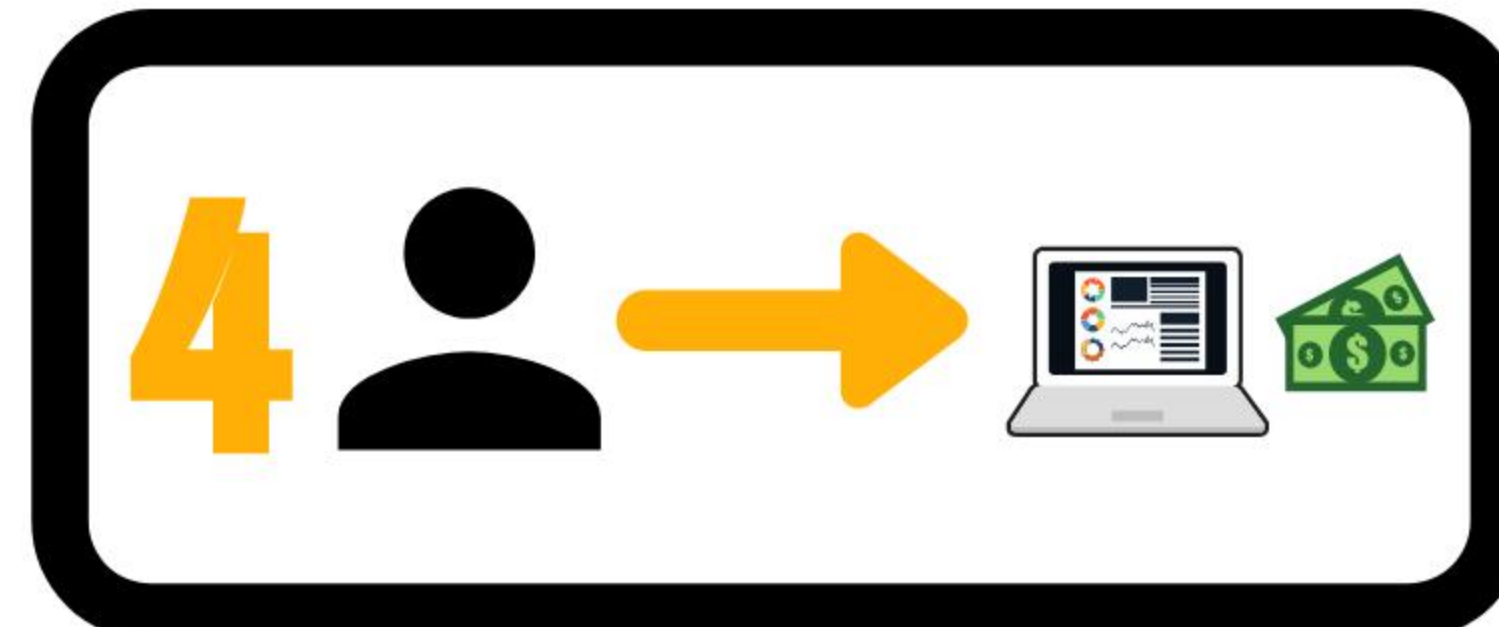

Clients purchase a transceiver or multiple transceivers from UtilityPal which allows for online monitoring of their utilities (electricity, water, gas & steam). One transceiver per utility item.

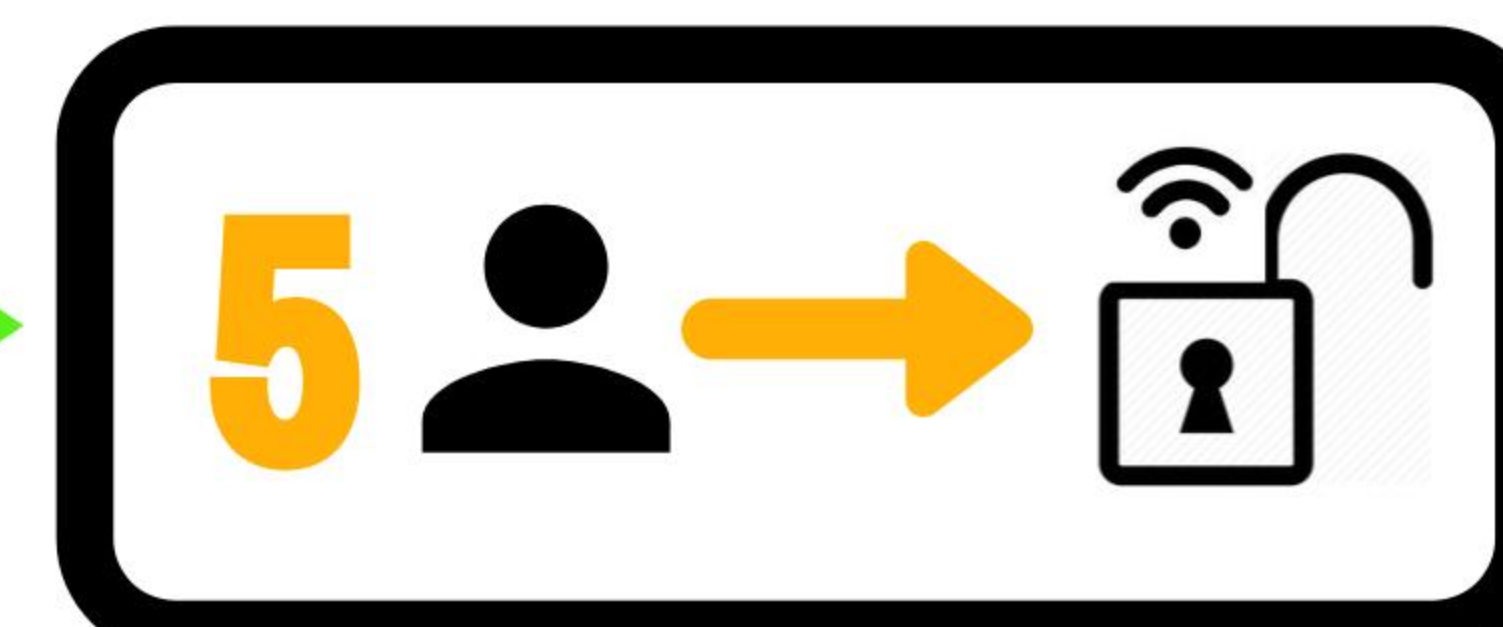

Transceiver/s is shipped to client with instructions on how to apply the transceiver to the product.

Once installed client has online access (mobile & desktop) to view hourly consumption, detect water bursts and leaks. Client can also set alerts for excessive usage.

Client is aware of consumption patterns that can lead to savings on utilities.

Client pays yearly for data transmission and use of online cloud platform.
